HEADQUARTERS SAN ANTONIO AIR LOGISTICS CENTER (AFLC)
KELLY AIR FORCE BASE, TEXAS 78241-5000

Aug 31, 1990

TO: Air Force PMEL Managers and
Users of the 9100A/AF, (NSN 6625-01-248-0958)

SUBJECT: 9100A/AF Upgrade Kits

FROM: Jerry Hillmeyer
SA-ALC/MMTEE
Kelly AFB, TX 78241-5000

John Fluke Mfg. Co. has proposed to upgrade the memory and operating system of the 9100A/AF's Microprocessor Board Testers currently in the Air Force inventory. They also wish to provide software for the 9100's to troubleshoot the 8505A multimeter. The Air Force has accepted this proposal because it will certianly benefit the users and because it is free.

The kits will include installation instructions, changes for the technical orders (TO's), hardware to expand the memory to 4 Megabytes, and floppy disks containing operating system software and 8505 troubleshooting routines.

The kits will be shipped directly to the PMEL's and to the Marines who also purchased the 9100's, but the users will have to install the kits themselves.

The Air Force point of contact is Jerry Hillmeyer, AV 945-3734.
